JAYNEEL VORA

One Shields Avenue, Davis, CA | (925) 577 9952 | jrvora@ucdavis.edu | www.jayneelvora.com

SUMMARY

- Third-year Ph.D. student trained in privacy-preserving machine learning, systems designing, and software development, with strong communication skills, developed from extensive teaching experiences. Sound ability to work independently and as a part of a team.
- Looking for internship opportunities at an esteemed organization to further develop my skillset in systems designing and bring a fresh perspective on open research questions.

EDUCATION

University of California at Davis Fall 2019- **Spring 2024(expected)**

Ph.D. in Computer Science (3.86/4.00), Advisor: Dr. Prasant Mohapatra

Thesis: Game Theoretical Models for Multiple Defender Scenarios

Institute of Technology, Nirma University 2015-2019

B.Tech in Computer Engineering, Major Advisor: Dr. Sudeep Tanwar

SKILLS

Mathematical Maturity	Discrete Math, Calculus, Linear Algebra, Complex Analysis, Optimization
Theory Maturity	Differential Privacy, Federated Learning, Consensus, Deep Learning, Distributed Systems
Programming Language	Python, SQL, PHP, Qiskit, read: R, C, C++, Java, MATLAB
Framework and Tools	Tensorflow, Git, LaTeX, Docker, MongoDB, Apache Spark, Tableau

INTERNSHIP EXPERIENCE

Graduate Technical Intern - Core OS at Intel, Hillsboro, Oregon Jan- Apr 2022

Memory Access Tracking with Praveen Ankala

- Understanding memory tiering and memory access in a heterogeneous memory architecture.
- Design workloads, collect histograms to identify optimizations to the console client.

Engineering Intern(Ph.D.) at Garrett Motion, Atlanta, GA Sep-Dec 2021

V2X protocols and intrusion detection systems(IDS) with Gabriel Ciubotaru

- Review attack surfaces for V2X protocols to identify potential vulnerabilities, write a demo IDS for the said vulnerabilities.
- Propose feasibility of a business need to enter the V2X market space based on reviewed and demo protocols and vulnerabilities.

Graduate Student Researcher at Lawrence Berkeley National Laboratory, Berkeley, CA Jun-Sep 2020

Differentially Private(DP) Dataset Access with Dr. Sean Peisert

- Designed query engine in the UC CORDS dataset that outputs results, preserving privacy and maintaining accuracy for analysts.
- Investigated (DP) frameworks- SmartNoise and OpenDP for common queries while exploring utility to OMOP based databases.
- Evaluated the query engine on clustering methods and identified the impact of Laplacian noise parameters on convergence metrics.

AI and HCI Intern at BrunHealth Pvt Ltd, India May 2018-Apr 2019

Pregnancy Chatbot System with Dr. Prashant Jha

- Wrote algorithms for profiling users and match messages to send to increase user interactivity on the company's FB page.
- Created an information delivery system for expectant mothers, using reactions to messages and identifying a user's stage in the journey.
- The chatbot achieved a 29% increase in user retention and 44% increase in user turnaround time compared to human response.

Tech Intern at Sentinel Healthcare, Seattle, WA (now Alertive Healthcare) May 2017 - July 2017

Gait Analysis System and Stroke Detection with Dr. Nirav Shah

- Observed doctors and therapists to understand the workflow in hospitals, clinics, and care homes.
- Created an Arduino offline gait-analyzing wearable prototype, achieving a 73% accuracy with gait state and transition classification.
- Feasibility study with ophthalmologists on an OpenCV-based stroke detection prototype and fundus image processing app for retinopathy.

RESEARCH EXPERIENCE

NLP Based Automated Tumor Staging: Hepatocellular Carcinoma Sep 2021-present

- Reviewing and testing BERT models for name entity recognition in clinical patient notes and understanding diagnostic severity.

Game Theoretical Models for Multiple Defender Scenarios Jan 2021-present

- Learning parameterized 'human' strategies from Prisoner's Dilemma(PD) trials to discuss methods to identify the intent behind actions.
- Validating parameters of information sharing(IS) amongst players in a network with added context in a repeated IS game as a PD

Mathematical Challenges and Opportunities for Autonomous Vehicles
Sept-Dec 2020

- Core-participant, "Long Program: Mathematical Challenges and Opportunities for Autonomous Vehicles," at IPAM, UCLA.
- Member of a working group on 'Perception, Safety, and Control of Machine Learning in Autonomous Driving'.
- Investigated the case of using dropout layers in deep neural networks to model uncertainty along with Bayesian inference.

Implementations on 60 GHz testbed
Sept 2019- Mar 2020

- Investigated mm-wave communication protocols and reviewed mm-wave sensing for VANETs.

Communication Paradigms for ambient assistant living and VANETs
Jul 2015- May 2019

- Built a proof of concept studying the use of fog computing paradigms and tactile internet infrastructure for patient monitoring.
- Explored distributed system paradigms for patient monitoring and e-health records storage focusing on preserving privacy.
- Reviewed and published a review of security attacks on VANETs focusing on types of attacks and corresponding safety protocols

AWARDS

1. CS TA of the year award UC Davis- 2021
2. Best Paper Award, 2019 IEEE ICC Workshops: SecSDN
3. CS Department Fellowship, UC Davis- 2019
4. Travel Award, *IEEE COMSOC* for attending IEEE GLOBECOM 2018

TEACHING

1. Teaching in Computer Science, Instructor — Spring 2022, Fall 2020, Fall 2021
2. Probability and Statistical Modeling, Lead Graduate Teaching Assistant — Summer 2020
3. Discrete Mathematics, Lead Graduate Teaching Assistant — Winter 2020, Spring 2020, Winter 2021, Spring 2021

PROFESSIONAL ACTIVITY

1. Program Committee Member, GameSec 2021
2. Reviewer, Wiley- Security and Privacy Journal
3. Shadow Program Committee, IEEE Security and Privacy 2020
4. GSA Representative, UC SHIP and Committee on Courses
